## E-34/2111

## BUSINESS STATISTICS

Paper-306
Semester-III
Time Allowed : 3 Hours] [Maximum Marks : 70
Note : The candidates are required to attempt two questions each from Sections A and B carrying 10 marks each and the entire Section C consisting of 10 short answer type questions carrying 3 marks each.

## SECTION—A

1. Discuss about the various measures of Dispersion.

Distinguish between Mean deviation and Standard deviation.
2. Explain the concept of Time Series Analysis. Discuss the different components of Time Series. 10
3. The median and mode of the following wage distribution are known to be ₹ 33.5 and ₹ 34 respectively. Three frequency values from the table are however missing ? Find out the missing frequencies when sum of frequencies is 230. 10

| Wages (₹) | No. of Persons |
| :---: | :---: |
| $0-10$ | 4 |
| $10-20$ | 16 |
| $20-30$ | - |
| $30-40$ | - |
| $40-50$ | 6 |
| $50-60$ | 4 |

13548/NJ/454/W/10,410 2
4. Assume a four yearly cycle and calculate the trend by the method of moving averages from the following data relating to the production of Tea in India :

| Year | Production |
| :---: | :---: |
| 1994 | 465 |
| 1995 | 515 |
| 1996 | 518 |
| 1997 | 467 |
| 1998 | 502 |
| 1999 | 540 |
| 2000 | 557 |
| 2001 | 571 |
| 2002 | 586 |
| 2003 | 612 |

## SECTION—B

5. Calculate Price Index number using Laspeyre's method from the following data :

| Commodities | 1990 |  | 2000 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Price | Quantity | Price | Quantity |
| A | 8 | 10 | 10 | 11 |
| B | 10 | 9 | 12 | 9 |
| C | 16 | 16 | 20 | 17 |

6. From the following data obtain the Regression equation of Y on X :

| X | 40 | 50 | 38 | 60 | 65 | 50 | 35 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Y | 38 | 60 | 55 | 70 | 60 | 48 | 30 |

Also estimate Y when $\mathrm{X}=5$.
7. What do you mean by Correlation analysis ? Explain the various types of Correlation analysis.
8. Define Forecasting. What are the various methods of Forecasting ? ..... 10
SECTION—C
9. Answer any $\mathbf{1 0}$ of the following :

$10 \times 3=30$(i) Limitations of Index numbers.(ii) Explain Fisher's ideal index.(iii) Seasonal variations of Time series.(iv) Co-efficient of Variation.(v) Problems in construction of Index numbers.
(vi) Explain Standard deviation.
(vii) Calculate Co-efficient of Variation whenCovariance of x and y is 488 and varianceof x is 825 and variance of y is 325 .
(viii) The mean of 75 observations is 27. Later on it was discovered that one observation was wrongly read as 43 instead of the correct value was 53 . Find the Correct mean.
(ix) Calculate Karl Pearson's coefficient of correlation between expenditure on Advertising ( X ) and Sales ( Y ) from the data given below :
$\mathrm{X} \quad \mathrm{Y}$
$39 \quad 47$

(x) Write Regression equations of X on Y and of Y on X for the following data :

| X | Y |
| :--- | :--- |
| 45 | 25 |
| 48 | 30 |
| 50 | 35 |
| 55 | 30 |
| 65 | 40 |
| 70 | 50 |
| 75 | 45 |
| 72 | 55 |
| 80 | 60 |
| 85 | 65 |

(xi) An investor is fond of investing in Equity shares. During a period of falling prices in the stock exchange, a stock is sold at ₹ 120 per share on one day, ₹ 105 on the next and
₹ 90 on the third day. The investor has purchased 50 shares on the first day, 80 shares on the second day and 100 shares on the third day. What average price per share did the investor pay?
(xii) A person has invested ₹ 5,000 in the Stock market. At the end of the first year the amount has grown to ₹ 6,250 ; he has had a 25 percent profit. If at the end of the second year his principal has grown to ₹ 8,750 , the rate of increase is 40 percent for the year. What is the average rate of increase of his investment during the two years ?
